Project Name	Book-Store
Maximum Marks	4 Marks

IDEATION PHASE: BRAINSTORM & IDEA PRIORITIZATION

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The development team initiated the ideation phase by gathering to analyze the core challenges within the digital bookstore industry. By discussing target demographics, seller limitations, and cart abandonment concerns, the team formulated and finalized the problem statement for the BookStore (BookVerse) application.

Figure 1: Student development team collaborating around a desk to formulate the bookstore problem statement.

Step-2: Brainstorm, Idea Listing and Grouping

During the idea listing phase, team members generated diverse ideas for site capabilities. These concepts were grouped into distinct architectural models: User shopping experience, Seller book inventory control, and Administrative approval and logging monitors.

Figure 2: Idea mapping session showing features categorized into modules on a collaboration board.

Step-3: Idea Prioritization

Using a 2x2 Action Priority Matrix (comparing System Impact vs Implementation Effort), the team mapped listed ideas to identify quick wins. Features such as direct checkout, visual dashboard charts, and search filters were prioritized as core MVP components, while payment gateway integrations were scheduled for future releases.
